

ELT-AVT

Project Name:	
Type:	

ELT-AVT series offer four designs that emulate popular themes in architectural design trends, allowing the luminaires to complement any environments. With a unique design solution, this luminaire can dynamically transform grid ceiling lighting design in commercial environments.

APPLICATION

These color capable luminaires bring flexibility and open doors to various types of applications. The RGB technology is a combination of three primary colors - red, green, and blue - to form a different array of colors. The RGBW technology is a combination of those three primary colors in addition to white. Additional white LEDs illuminate a much purer white tone and brings flexibility for color mixing through the RGB chips. Playing with different colors of the LEDs can form infinite color hue possibilities to not only just illuminate space, but manipulate for your desired hue and shades. Flexible control solutions from wireless remote, Bluetooth, to DMX512 with a wall mount touch panel can provide an ultimate solution to optimize the needs from residential to commercial, healthcare, education, retail, entertainment, office, and more.
